## DETAILED ACTION

### *Claim Rejections - 35 USC § 102*

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 56-70 are rejected under 35 U.S.C. 102(b) as being anticipated by Tsai et al, of record.

Although some of applicants' remarks appear to have been omitted between pages 7 and 8, it appears that a typographical error in the previous office action may have led to some confusion as to the applicability of the Tsai reference.

For example, the FIG. 13 embodiment of the Tsai reference teaches the structure of claim 56 showing a substrate, a gate structure (12) having sidewalls (13), a plurality of first diffusion regions, either (21) or (22) with a first dopant and adjacent to the sidewalls, a plurality of second diffusion regions (23) with a second dopant, wherein the first diffusion regions, either (21) or (22), extend beneath the gate and are located beneath the respective second diffusion regions (23), and where none of the second diffusion regions extend beneath the gate, as claimed.

The Tsai reference also teaches the relative dopant concentrations of the various regions (col. 6, l. 20) including where the first dopant concentration of a first diffusion region, e.g. region (22), can be  $2E12$  atoms/  $cm^2$ .

With regard to claim 66, this structure is also shown by FIG. 13 of Tsai, for example, where the first "portion" may be comprised by regions (21) or (22) as above, and where the second portions can be comprised of regions (16) or (23) since both of these regions are of the same conductivity type, and neither extends beneath the gate structure.

Tsai also teaches the use of the same dopants as claimed.
